

SimplySecure™ Phones & Tablets

for iOS and Android

Easily control & secure vulnerable mobile devices.

Beachhead's SimplySecure™ Management System is a single, configurable, web-based console with device modules that can be added in any mix or quantity for iPhone & iPads, Android devices, Windows & Mac PCs and USB storage devices. This unique system allows you to remotely secure the vulnerable devices in your organization - including those owned by employees.

Bring Your Own Device (BYOD)

Productivity tools now come in many shapes and sizes: tablets, smartphones, laptops and portable computing devices. An employees' preferences for their phones or tablets is often so strong that they will purchase the chosen device themselves. While most organizations welcome the cost-savings and enhanced employee productivity associated with today's BYOD world, there is good reason to worry about the vulnerability of your company's sensitive data as it proliferates on a great number of devices further and further from network and corporate control.

Engineered To Be Delivered Through "The Cloud" and offered as software-as-a-service ("SaaS") subscription, Beachhead services were the first to market - even before The Cloud and SaaS were fashionable. This web-managed approach has proven to be particularly pertinent given the proliferation of device types, operating systems and communication protocols that have moved ever further from corporate controls. With Beachhead subscriptions there is absolutely no software or network infrastructure to buy or support. Protection can be deployed over your entire inventory of mobile devices immediately through the cloud, providing company-wide protection in a matter of hours.

Configure to Protect All or Some of Your Mobile Devices

Beachhead's modular system allows you to choose which devices you need to protect. Do you need policy control and security for just Tablets and Phones? Easy! Get SimplySecure Phones & Tablets modules to add to your SimplySecure™ Control Panel. You want to encrypt and secure your inventory of Mac computers? No problem. Simply add SimplySecure™ Mac in the quantities for those devices. HIPAA regulations require you to encrypt your Windows PCs? With Beachhead's console, you can add SimplySecure™ PC modules as needed for your unique mix of mobile devices. The SimplySecure™ system works is effective enough for company-owned devices and unobtrusive enough for devices owned by employees.

The Right Security & Policy Control for Your Organization

Beachhead subscriptions and services provide administrators with enhanced visibility and extremely easy-to-manage policy control for mobile data depositories, including your PCs, smartphones, tablets and USB storage. Now, all your endpoint data - wherever it may be - can be encrypted and secured with one powerful, centralized management console.
